

Within-network predictors of branch-specific PBS — combined dataset (HGDP+1KGP+SGDP)
outcome = within-network percentile; * = permutation p < 0.05 (SGDP-only genome-wide version is null — see caveats)

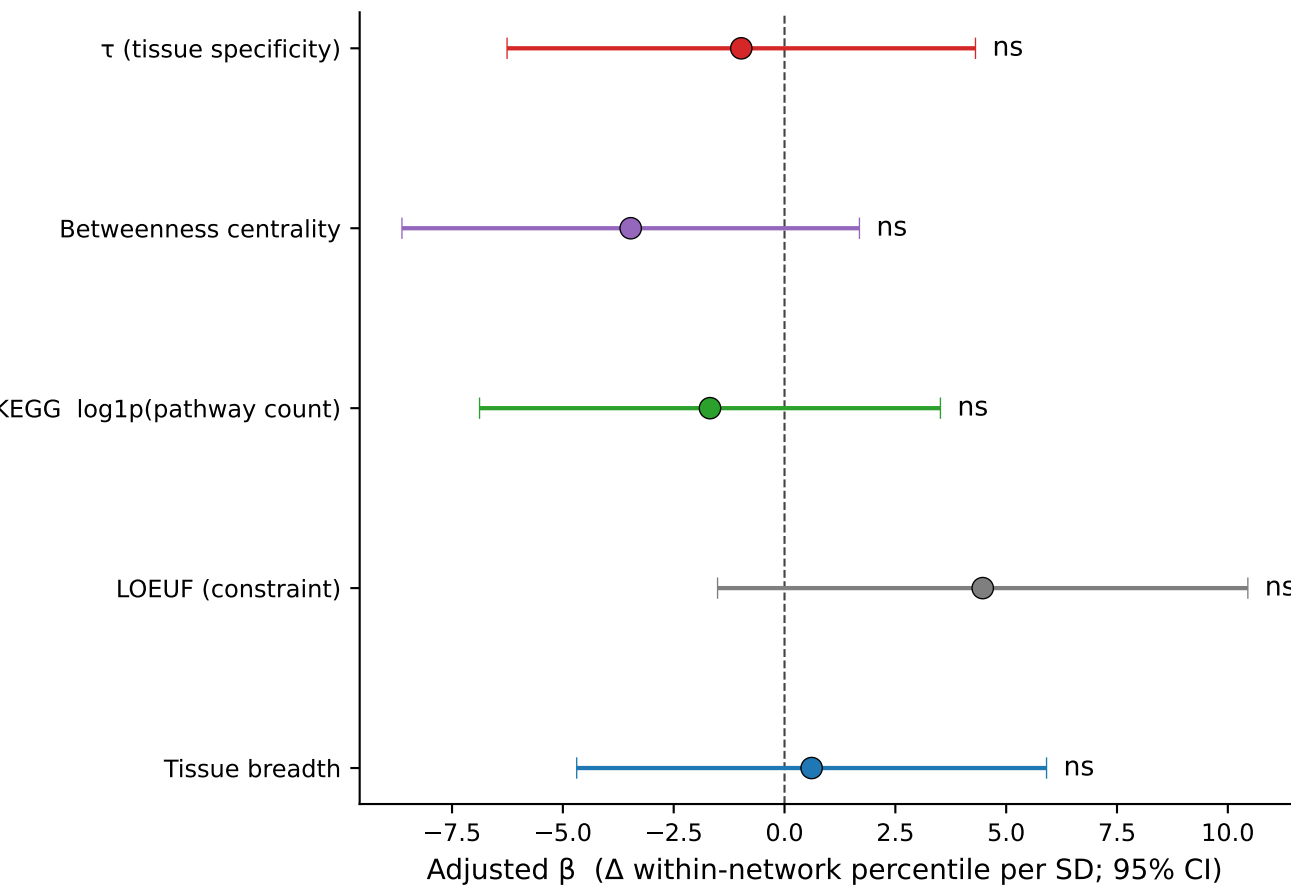

AFR — African (PBS-1, S.Asian outgroup)

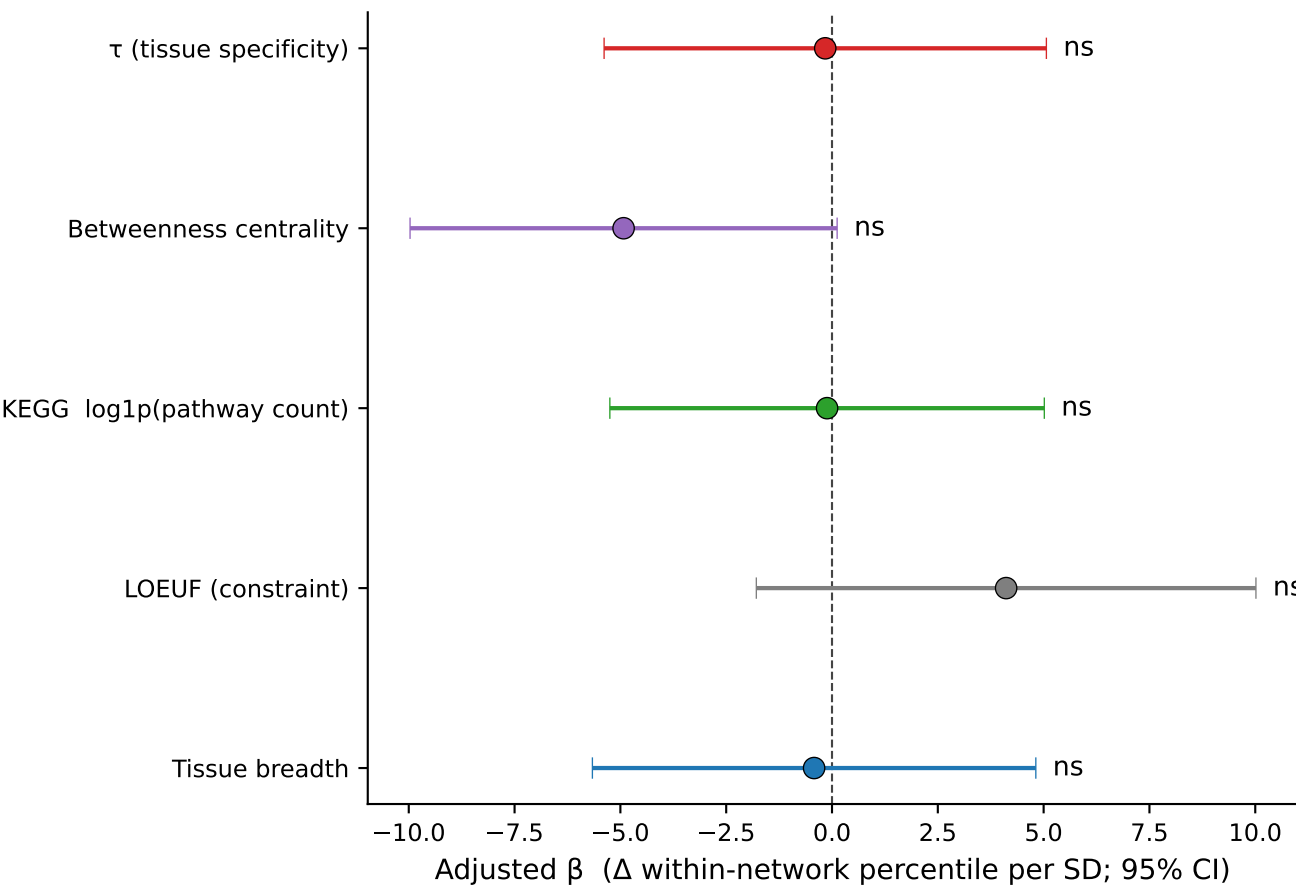

MEL — Melanesian (PBS-3, S.Asian outgroup)

EUR — European (Afr-Mel reference)

SAS — South Asian (Afr-Mel reference)

● τ (tissue specificity) ● Betweenness centrality ● KEGG log1p(pathway count) ● LOEUF (constraint) ● Tissue breadth
