

Tissue specificity (τ) vs. within-pathway centrality and population-specific selection
Node size = PBS value | $\tau = 0$: uniformly expressed | $\tau = 1$: tissue-specific

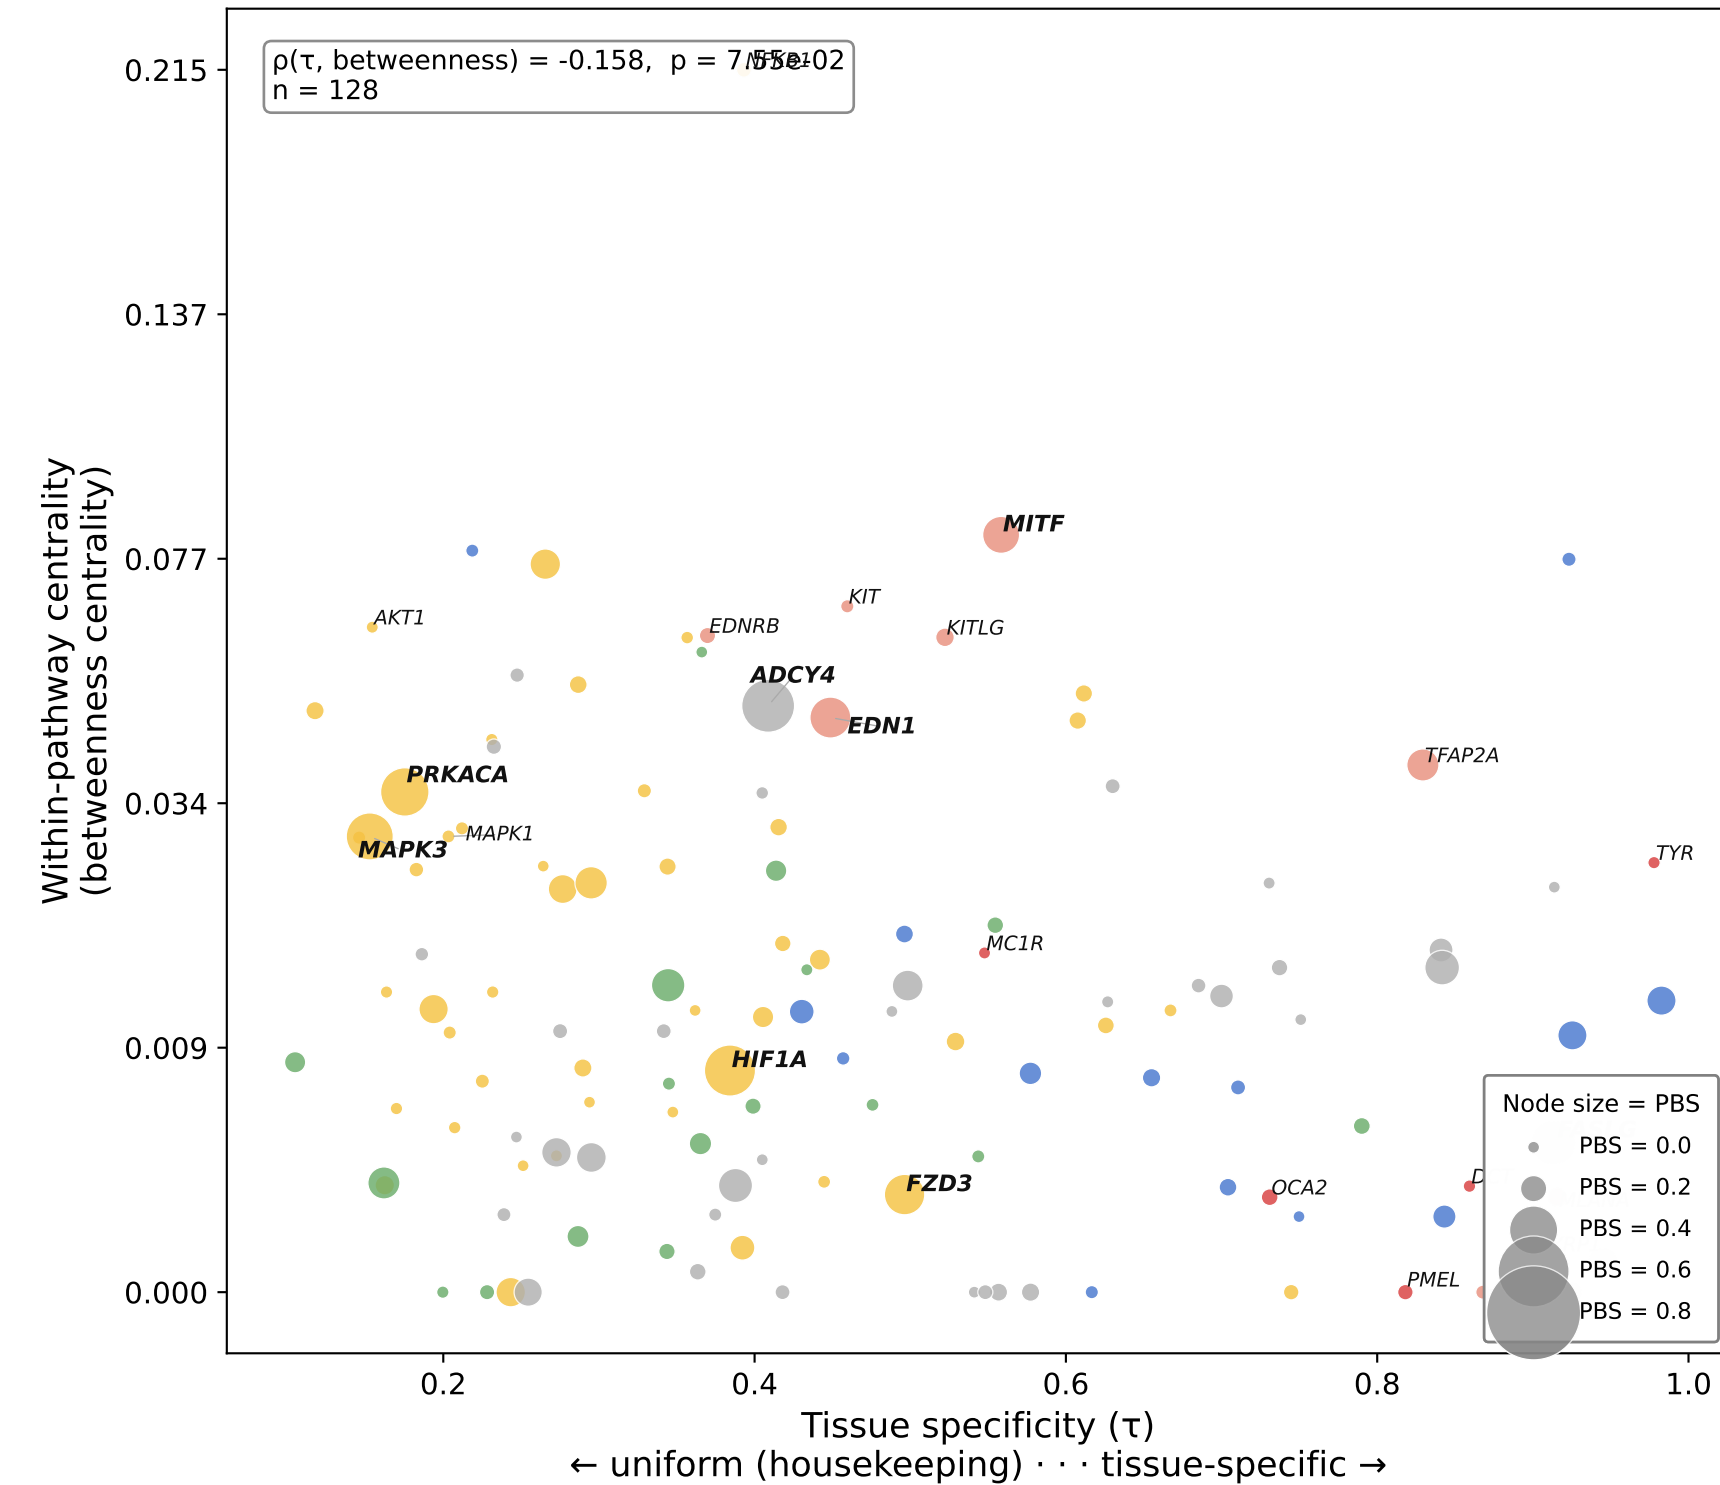

A

PBS-1: African population-specific selection
(S. Asian outgroup, Melanesian distant)

B

PBS-3: Melanesian population-specific selection
(S. Asian outgroup, African distant)

Functional category (node color)

Pigment-specific	Developmental/NC	Generic signaling	Cytokines/growth factors	Apoptosis/cell death	Other
------------------	------------------	-------------------	--------------------------	----------------------	-------
