

τ -split skin-specificity heatmap with selection overlay — 127 network genes $\times$ 54 GTEx tissues
tissue-specific ($\tau \geq 0.7$) on top, broadly expressed below; coloured side-bar = PBS quadrant

τ -block $\times$ selection (Afr vs. Mel only)
OR = 0.10 Fisher p = 4.59e-02
high- τ : Afr = 1, Mel = 7
low- τ : Afr = 21, Mel = 15

PBS selection quadrant

- Melanesian-specific (n=22)
- African-specific (n=22)
- Both (n=9)
- Neither (n=70)
- No PBS data (n=4)
